DEEPJUDGE

ZURICH, SWITZERLAND

Application for Applied AI Engineer

Dear DeepJudge Hiring Team,

About Me

I am a Software Engineering Lead based in Zurich with 7+ years building backend systems, full-stack applications, and AI/ML pipelines across regulated finance and large-scale consulting. At EPAM I lead a 7-engineer team owning data-integrity architecture end-to-end, keeping 500K+ metadata updates per day consistent across Apache Atlas, Azure, and mainframe DB2 systems. My recent work extends deeply into LLMs, RAG pipelines, and agent design – the exact intersection of production engineering and applied AI that this role demands.

Why DeepJudge?

DeepJudge's mission to unlock trapped institutional knowledge in law firms through enterprise search and AI infrastructure is a problem I want to work on. The gap between raw LLM capability and dependable, customer-facing solutions in high-stakes domains is where the real engineering challenge lives. Building reusable AI-powered experiences on top of your platform for firms like Freshfields and Gunderson Dettmer – not demos, but systems thousands of end users rely on daily – is exactly the kind of ownership-driven work I am looking for.

Why Me?

My stack maps directly to what you need. I work daily in Python and TypeScript, with deep hands-on experience in LLMs, RAG pipelines, agent design, and machine learning (TensorFlow/Keras). I have shipped production systems at scale: a Kafka-driven async service that cut messaging latency by 85% for 150K+ messages per hour at JPMorgan Chase, and an automated data-lineage pipeline spanning 4 analytics warehouses at EPAM. I am comfortable evaluating emerging LLM techniques and bringing them into production, and I have a track record of working directly with non-technical stakeholders – from building live dashboards for 10+ analysts to serving on expert-assessment committees and mentoring engineers. I would welcome the chance to discuss how I can help DeepJudge turn its platform into high-value AI solutions that law firms depend on.

Sincerely,

Spas Zahariev
