SYGNUM BANK AG
UETLIBERGSTRASSE 134A
8045 ZURICH, SWITZERLAND

Application for Senior Software Engineer, AI (VN243)

Dear Sygnum Hiring Team,

About Me

I am a Software Engineering Lead with 7+ years building backend and full-stack systems across regulated finance, and I am applying for the Senior Software Engineer, AI role on the Client Lifecycle & Banking Value Stream team. My career has been split between two worlds that this position brings together: rigorous banking engineering at JPMorgan Chase, and production AI/ML delivery. At EPAM in Zurich I currently lead a 7-engineer team owning data-integrity architecture end-to-end, keeping 500K+ metadata updates per day consistent across Apache Atlas, Azure, and mainframe DB2 systems, work that lives or dies by reliability, auditability, and security rather than demos.

Why Sygnum?

Sygnum's ambition to make AI infrastructure inside a regulated bank, not a collection of proofs-of-concept, is exactly the problem I want to work on. I have spent years shipping systems where regulatory exposure and data integrity are first-class constraints, and I believe the hard part of the Sygnum AI Hub is not the prompt, it is making agents dependable enough to sit next to core banking processes. Building a trusted gateway between traditional and digital asset banking, from Zurich where I am already based, is a mission I would be glad to commit to for the long term.

Why Me?

The stack maps directly onto my experience. I work daily in Java, Python, and TypeScript, and my recent work is deep in LLMs, RAG pipelines, and agent design, backed by microservices, event-driven architecture (Kafka), containerization (Docker/Kubernetes), and both Azure and GCP (Vertex AI, BigQuery). I have hands-on React experience from building WebSocket-driven dashboards at JPMorgan, and I am comfortable connecting AI agents to real banking systems and data sources, precisely the integration and Model Context Protocol work this role centers on. I would welcome the chance to discuss how I can help turn the Sygnum AI Hub into production infrastructure the bank can rely on.

Sincerely,

Spas Zahariev
